

Year 4 lights and torches
DT Project
Spring Term 2020

Year 4 used their science knowledge of electrical circuits to create a light for their DT project this term. Everyone had the same basic pieces and used additional materials found around the house to add to their designs.

Whilst we were still in school, we did some research into existing lights and torches to find inspiration for our own designs.

Then, we began building the main body of our light. Some of us chose to make torches, others opted to make lighthouses.

We tested our circuits to make sure that the bulb lit up when the switch was turned on. A variety of different switches were used in the class.
