

Year 4
Summer term
Tooth decay investigation results!

Year 4 have been learning about teeth in our science home learning. We learnt about the teeth of humans and of other animals and how these differ. We designed an investigation to try to find out which liquids and drinks are bad for our teeth. We used egg shells to replicate tooth enamel and soaked eggs in different liquids for one week.

Miss Brenta set it up at home, using our suggestions, and monitored the eggs. We made predictions of what we thought would happen. Some of us also followed along at home!

Fosco's eggs!

Elliott's eggs!

Zachary's egg!

Agnes' eggs!

The results!

Coca cola

Coca cola (covered in toothpaste)

Orange juice

Milk

Vinegar

Tea
