

In Year 3, we have been learning about UN Global Sustainability Goal 7: Affordable and Clean Energy. This involved thinking about the energy we consume and the impact it has on the natural world.

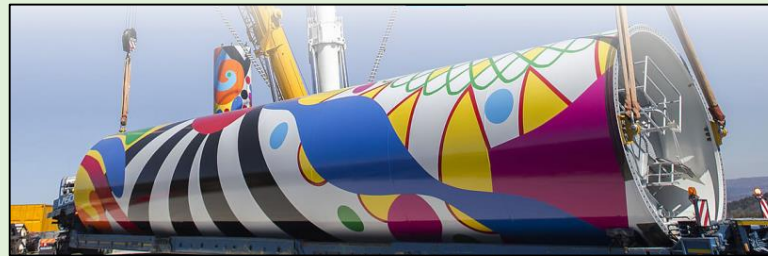

We researched the advantages and disadvantages of different types of renewable energy and decided to focus specifically on energy created by wind turbines.

## Year 3 Whole Class Art Project: Affordable and Clean Energy

Our whole class artwork was inspired by the Portuguese artist Joana Vasconcelos who is known for her large scale art works including a colourful wind turbine in Portugal.

We practised and developed our observational sketching and shading skills to design a wind turbine. We created a 2D design based on Vasconcelos' wind turbine and monoprinted our design to create our own 3D wind turbine. We then took inspiration from the artist Eileen Downes to create a landscape upon which our 3D wind turbines could be placed to envision what a greener and more sustainable future will look like.
