

Year 1 Autumn Term DT Project - Finger puppets

1. First, we looked at different images of toy puppets and thought about the different materials used to make them. Once we had identified the materials used, we considered the different ways in which they could be joined together to create a toy that would not be broken easily. We knew that these toys were going to be played with so we wanted them to be strong. Therefore we considered that the best method of joining together the materials would be to sew them.

2. After that we chose which Nativity character we wanted to create and drew a design of what we wanted it to look like.

3. Then we cut out following our templates and cut the decoration shapes out of felt ready to be stuck on with a glue gun.

4. Next, we practised our sewing skills to join the two pieces together.

5. Finally, we created our very own finger puppet nativity.
