

Year 4 Autumn Term DT Project

For our DT project this term, Year 4 thought about researching, designing, making and evaluating our own biscuit packaging.

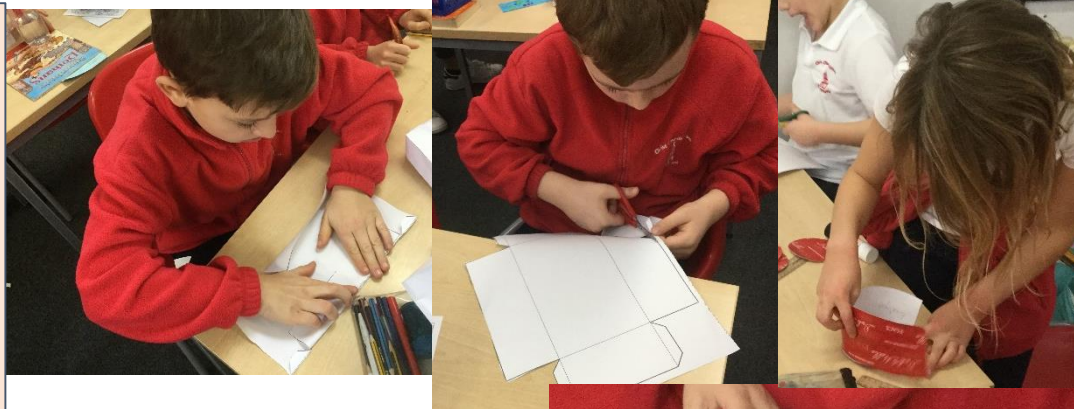

Once we had decided which shape we wanted to use, we designed our packaging. We thought about the size, the materials and other equipment we would need.

We used scoring with rulers to help us make our folds accurate and neat. This also helped our boxes look more professional.

We decorated our nets with Christmas wrapping paper before gluing them together and finishing with ribbon! Then we gave each other feedback.

We also added some biscuits which we decorated with chocolate. Now our boxes will make a great Christmas gift!

First, we did some market research. We found out about what types of packaging are already used and we created mood boards of different designs. We looked at some existing packaging and noticed that a lot of boxes are created using a 2D net. We discussed reasons for using different materials and shapes of packaging for different products.

Next we made some prototypes. We had a go at cutting, folding and gluing together different net designs, to help us create our own final design.
