The glu virus injects
your body thron your
nose, this happens when
an injected person
coughs or sneezes near
you.

Year 3 have been learning about viruses and bacteria. We have learned about how there are different types of viruses and that some bacteria are helpful. We have been learning how viruses enter the body and what we can do to minimise this risk e.g. washing hands, sneezing into elbows and throwing dirty tissues away. We created our own model viruses based on our learning.

My Virus is called Dotaplyus. It attacks your body when you don't brush your teeth properly, entering from your old dry toothbrush.

the purple dot on the side is the receptor and once inside the green proteins cause green dots on your skin. If you touch on e, you get three more green dots.

from sharing.
things like food
you car catchit.
Also caught from
eating doogy eggs.
There are lots of
different ways to get it

This virus is pretty common.

My virus name is sing 5 ong!

My scientific name is Orgiony!

Not very likely to kill you.

It injects your body by making your body weak so you are tired your skin becomes to sheded and you have a drie mouth.

The cure is medicine and to keep hiedrated.
