

YEAR 4

We learnt all about staying safe this week. We found out how to **predict, assess and manage risk**. We learnt about **hazards that may cause harm**. We spotted some hazards in the home.

Did you know that you can use a water bottle or a ball to help someone who has fallen into the water? Anything that will float will help!

We also found out all about staying safe near water. We had a Zoom workshop with Mike from the Canal and River trust. He taught us some great tips for dealing with danger around water. We made posters to show what we learnt.

We made board games to show our learning. The theme was 'keeping safe and healthy'. We thought about board design and how players would move around. Some of us wrote scenarios or questions on the game board and some of us made cards for players to pick up.
