

Thames Explorer!

Year 5 class trip

November 2021

Year 5 have been learning all about mountains and rivers in geography this term. We are currently learning about how rivers form, the key features of a river and how pollution affects river environments. We visited 'Thames Explorer' to learn more about the River Thames and the effects of pollution.

First of all, we had a lesson in the classroom where we learnt about the history of the Thames.

Once we had learnt about the history of the River Thames, we went down to the foreshore to learn about the tide, look for wildlife and test the pH level of the river water.
