

Each class developed their 'working scientifically' skills with an exciting workshop led by experts from the Francis Crick Institute. May 2022

Year 6 used their knowledge of light and how it travels to arrange mirrors and transparent objects to direct laser light to hit a target.

We also made up for the workshop at the Crick Institute that Year 6 had to miss last year, by bringing the equipment to school so they could take part in practical sessions investigating pH and electrical circuits. Year 6 loved the lab coats and protective goggles!
