

As part of our learning in science, we visited Hampstead Heath for a workshop all about classification. We have learnt in class that all living things can be classified based on their characteristics.

Year 4 science trip to Hampstead Heath

Then we went on a bug hunt! We explored the nature garden, carefully looking for a range of living things. We collected our findings in trays and small pots. We found all sorts of mini beasts!

Next we used classification keys and identification keys to find out more about the animals we had collected.

We started the morning by looking at some photos of living things and deciding how to group them. Some of us divided them based on mammals, birds and insects while some of us thought about the number of legs each living thing had.
