

Heath Education Centre trip – Golders Hill Park

Year 1 went on a trip to Golders Hill park to learn about plants. We learnt about the different parts of a plant – roots, stem/trunk, branches, leaves, flowers/fruit – and what they do, what plants need to survive, we looked for different plants and tried to identify them by looking at their leaves. We were even able to think about whether we thought they were deciduous or evergreen. At the end of the trip, we made our own plant pictures using things we found on the ground.
