

As part of our research, we looked at how Reception have supporting their bean plants and thought about how we could improve on it. We then explored making simple frame structures out of cotton buds.

Year 3's Plant Obelisks

Year 3's summer Design & Technology project was to design and make a frame structure to support bean plants to grow – aka a plant obelisk!

Finally we went into the playground and built our plant obelisks. We then planted our beans and waited for them to grow!

As the beans grow and start to need the support of a structure, we will be able to evaluate our finished product.

We then worked together in groups and made mini models. We then drew our designs and thought carefully about what materials to use.
