

Year 5's Trip to the Natural History Museum

We discussed biodiversity and how, over time, the biodiversity in an area can change. We recognised that sometimes these changes pose a danger to the organisms which live in an area.

Year 5 had a brilliant day the Natural History Museum! We took part in an amazing biodiversity workshop which recapped lots of our prior learning about living things and their habitats from Year 4.

Then, we were introduced to a problem facing a farmer. We had to interpret samples and think of solutions to an ecological problem

We classified and sorted real insect samples using a key and a microscope.

We ended our visit with a trip to the dinosaur exhibition!
