

Thames Explorer!

Year 5 Trip

March 2025

First of all, we had a workshop where we learnt about the history of the Thames.

Year 5 have been learning all about mountains and rivers in geography. We have learnt about how rivers form, the key features of a river and how pollution affects river environments. We visited 'Thames Explorer' site in Chiswick to learn more about the River Thames and the effects of pollution.

Once we had learnt about the history of the River Thames, we went down to the foreshore to take part in field work activities investigating the tide, looking for invertebrates and testing the PH level of the river water.
